Rotating machines, such as motors and generators, are very important components of power generation and industrial applications. Premature failure can result in economic losses due to unexpected power outages and damage to the asset itself. Effective maintenance planning is essential to have accurate component health information to know when they need repair or replacement.

During the session, we talk about the components that form a rotating machine and its weaknesses. You will know the methods of measurement and diagnosis to be more effective in detecting problems.
Background
Central Board of Irrigation & Power (CBIP) a premier Institution, setup by GOI in 1927 is serving the nation in the disciplines of Power, Renewable Energy and Water Resources Sectors for more than 94 years.

It is an exchange and knowledge bank for dissemination of technical knowledge & professional experience to help Engineers/Professionals to update their knowledge and gain practical know-how.

Unique Features of Online Trainings
- Training with high safety of participant’s as no travel & travel related cost is involved.
- Expert’s Panel discussions within participants.
- Learning and working balance as our sessions are planned for 2 hours per day.
- Well proven online platform with high cyber security.
- Live message chat, live voice chat, polls and quiz.
- Real time engagement.
- E-Certificates to the participants.

Objective
- To disseminate technical knowledge through various modes, e.g., publication of technical documents, organizing conferences/workshops.
- To provide specialized training to the professionals in the Power, Renewable Energy and Water Resources Sectors.
